Frontend Exam Document Presentation

Expense Tracker(with local storage)

This tool will be very useful and beneficial for all types of Small Business. Companies can maintain the monthly basis expenses update along with the type of expense.

Not only the credit amount but the debit amount can also be stored on the History panel.

On the Add Text field type the issue against which you want to register an expense.
On the Add Amount field type the amount(use -ve sign before the amount to make it debit).

On clicking on the Add Transaction button you will be able to see your issue beside the credited/debited amount under the History section.

Green mark on an issue shows for Credited Amount.
Red mark on an issue shows for the Debited Amount.

Your total amount along with saving and expenditure is also displayed over a separate panel.

How it is different than many other online Expences Tracker App:

- Using local storage, thus on reloading the webpage also the previous history will be there as it is.

- Very lightweight and easy to use web tool as it is totally offline.

- Same thing can be done using pen paper, but there is always a high chance of data loss which has been minimized over here.

- Simple easy to understand web tool with different types of functionalities

- Delete any history any time just by clicking over the delete button you will get correspond to each issue over history while hovering over the issues.

- Very much responsive in all types of devices.

- Well Optimized.
